

# Recommendations for Ascomilk F products

Add half of the water volume necessary at 55°C

Add necessary quantity of milk replacer according to feeding plan  
140 g / liter of water

Mix energetically during 30 seconds and add the other half of warm water for a meal between 38°C and 42°C

**Check regularly:**

Weight of the powder, volume of milk replacer, mixing and distribution temperature

**Other important points:**

Clean drinkable water  
Feed at regular hours.  
Straw and water, permanently  
Starter and concentrate changed daily

Avoid the over-feeding!

In case of doubts, check the body  
Temperature of the calf!

Age	Water	Milk
1-4 days	Colostrum	
5-7 days	2 L	280 g
Week 2	2,5 L	350 g
Week 3 - 7	3 L	420 g
Week 8	2 L	280 g
Week 9	1,2 L	168 g
Week 10	Weaning	

**Animal Feed**
